### **Vascular Lesions**

The Dynamis' long-pulse Nd:YAG laser, penetrating up to a depth of 5-6 mm into the skin, provides a highly effective solution for treating many types of vascular lesions. Independent research shows that over 75% of patients with deep hemangiomas that are treated with Nd:YAG see a dramatic regression in the lesion.

### **Key Treatments:**

- Hemangiomas
- Port-wine stains
- Telangiectasias
- Venous lakes
- Angiomas
